# ISSTI is a leading centre for interdisciplinary research into science and technology and their social dimensions

## Our research interests span:

- information and communication technologies
- genomics/life science technologies
- environmental innovation and energy technologies
- new and emerging science and technology (nanotechnologies, nano-bio)

## Our research is characterised by:

- our interdisciplinary approach encompassing the social and technical worlds
- close collaboration with practitioners and policymakers
- an international focus, especially Europe, China, Africa, and Latin America

## Our recent and current research areas include:

- social and economic dimensions of innovation in genomics
- interdisciplinary collaboration on dependability in computing
- strategies of inclusion: gender and the information society
- robust, integrative interdisciplinary governance models for emerging and existing risks
- innovation and policy issues in renewable energy technologies and energy efficiency

## Our training and development feature:

- a vibrant postgraduate programme in science and technology studies
- vocationally orientated courses in policy and innovation strategy, ICTs and biotechnology
- programmes for visiting researchers
